5-MINUTE DEMO

Build an Exam Prep Tool with One Prompt

From slides → interactive study guide in minutes.

No code. No templates. Just a good prompt.

THE PROBLEM

Study guides take forever.

And most of them are just… rereading slides.

Hours to build

Writing questions from scratch is slow and tedious

Passive review

Rereading notes does not reveal what you do not know

No feedback loop

You cannot tell if you actually understand it

THE SOLUTION

One prompt. A complete interactive study tool.

- Upload slides or notes
- Auto-generated questions
- Instant corrective feedback
- Live score dashboard
- Deficiency tracker
- Remediation round

39	10	1	0
questions	sections	HTML file	installs needed

Here’s what we are building

Interactive Quiz Demo

HOW TO USE IT

3 steps. That's it.

01

Upload your materials

Drag your slides, notes, or a PDF into Claude. It reads and understands your content — no manual copy-paste needed.

02

Paste the prompt

Use the exam prep prompt on the next slide. It tells Claude exactly what to build: question types, feedback, scoring, dark theme.

03

Download & use

Claude generates a single self-contained HTML file. Open it in any browser — nothing to install, no login, no account.

THE PROMPT

Copy. Paste. Done.

Paste this into Claude after uploading your study materials:

PROMPT — paste into Claude after uploading your file(s) / Source Materials

Build an interactive exam prep module from the uploaded materials.

Prompt Highlights (View Full Prompt)

- Divide questions into sections matching major topics in the source
- Mix multiple choice, true/false, and select-all-that-apply
- Show corrective feedback immediately after every answer
- Include a live dashboard: correct, wrong, score %, remaining
- Track which topics are missed and show a deficiency panel
- After all questions, offer a remediation round for missed items
- Dark theme, Google Fonts, smooth slide-up card animations
- Output a single self-contained HTML file — no external dependencies

PROMPT TIPS

Why this prompt works.

Principles any new AI user can apply to their own prompts.

📌 Be specific about output format

Say "single self-contained HTML file" — not just "make a quiz." AI follows exact specs.

❓ Describe structure, not just content

List what each section should contain. "Each question shows feedback explaining why" is better than "add feedback."

🎨 Give aesthetic constraints

"Dark theme, Google Fonts, slide-up animations" sets the visual bar. Vague prompts produce generic output.

🚫 Say what NOT to do

"Do not reference external materials" keeps questions self-contained. Constraints improve quality.
